The Standard Group installs KODAK MAGNUS VLF Platemaker

The KODAK MAGNUS VLF Platemaker is one of the fastest fully-automated VLF platemakers on the market, providing exceptional productivity and high-quality thermal imaging. Coupled with the Automatic Cassette load feature, Automatic Punch Register and Plate Stacker this purchase has given our prepress complete automation.

The Multiple Cassette Load Unit (MCU) operates with four cassettes load tables holding up to 75 plates each. This allows longer continuous operation reducing error due to manual feed. A continuous load feature for the Magnus allows for two-plate queuing. Plates are loaded and ejected at the same time. The Magnus exposes using SquareSpot Technology and can expose as small as a 10 micron dot. The Automatic Punch feature has also reduced potential manual errors ensuring repeatability for better start up registration on press.

For more information, please contact your local TSG Packaging Consultant, or email us at marketing@thestandardgroup.com
